

Installing Overture

You will need to have Overture installed on your laptop for the tutorial (otherwise you can just following along with the presentation.) There are several options for installing Overture:

(1) If you have a Linux or Mac laptop, you may download and install Overture (and cg) from the Overture web site www.llnl.gov/casc/Overture and follow the installation instructions.

(2) If you have a Windows laptop you can install VirtualBox, <https://www.virtualbox.org/>, which will allow you to install Linux (e.g. Ubuntu, Fedora) in a virtual machine. You can then follow the install instructions in the file: [https://computation.llnl.gov/casc/Overture/henshaw/documentation/Installing Overture on Ubuntu 10 04 LTS.pdf](https://computation.llnl.gov/casc/Overture/henshaw/documentation/Installing_Overture_on_Ubuntu_10_04_LTS.pdf)

Any questions regarding the installation of Overture may be directed to Kyle Chand at chand1@llnl.gov or Bill Henshaw at henshaw@llnl.gov.
